Java Full Stack Developer | Spring Boot & React

PROFESSIONAL SUMMARY

Java Full Stack Developer with a strong foundation in Object-Oriented Programming and hands-on experience building production-grade applications using Java, Spring Boot, React, and MySQL. Designed and developed two end-to-end full-stack systems, ORIVEX and TRAFIKKING X, implementing JWT-based authentication, role-based authorization, RESTful APIs, and real-time communication via WebSockets (STOMP), following Clean Architecture and SOLID principles. Solved 300+ Data Structures and Algorithms problems on LeetCode, with a solid grounding in DBMS, Operating Systems, Computer Networks, and System Design.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering 2022 - 2026

Guru Gobind Singh Indraprastha University (GGSIPU), India | CGPA: 8.1

SKILLS & TECHNICAL STACK

- **Programming Languages:** Java, JavaScript, SQL, HTML5, CSS3
- **Backend & Frameworks:** Spring Boot, Spring Security, Spring Data JPA, Hibernate, JWT Authentication, RESTful APIs, WebSocket (STOMP), Maven, JUnit, Mockito
- **Frontend:** React.js, Vite, Tailwind CSS, Framer Motion, React Router, React Query, Axios, Shadcn UI
- **Databases:** MySQL, Database Management Systems
- **Tools & DevOps:** Git, GitHub, Postman, Docker, VS Code, Vercel
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming, Collections, Multithreading, DBMS, Operating Systems, Computer Networks, System Design, Clean Architecture, SOLID Principles

PROJECTS

ORIVEX - AI-Powered Freelance Marketplace [GitHub](#) | [Live Demo](#)

- Architected a full-stack freelance marketplace, inspired by Upwork and Fiverr, using React, Spring Boot, MySQL, and JWT-based authentication.
- Implemented secure role-based authorization, project management, and proposal workflows to support end-to-end freelance engagements.
- Engineered real-time chat using WebSockets (STOMP), in-app notifications, contract management, and LiveKit-based audio/video calling.
- Applied Clean Architecture and SOLID principles across the Spring Boot backend to keep the codebase scalable and maintainable.
- Wrote unit tests using JUnit and Mockito to validate backend functionality and improve code reliability.

TRAFIKKING X - AI-Powered Emergency Response Ecosystem [GitHub](#) | [Live Demo](#)

- Built an AI-assisted emergency response platform using React, Spring Boot, and MySQL to coordinate real-time dispatching.
- Implemented JWT authentication and multi-role dashboards for ambulance, hospital, and police coordination.
- Engineered incident management with ETA calculation, live ambulance tracking, and WebSocket-based real-time updates.
- Designed an AI recommendation engine for dispatch automation, backed by a notification system and interactive maps on a production-grade Spring Boot architecture.

ACHIEVEMENTS

- Solved 300+ Data Structures and Algorithms problems on LeetCode, strengthening problem-solving skills, algorithmic thinking, and coding interview readiness.
- Independently designed, built, and deployed two production-scale full-stack systems from scratch, covering backend architecture, database design, and frontend development end to end.
