Java Full Stack Developer | Spring Boot & React

PROFESSIONAL SUMMARY

Java Full Stack Developer specializing in Spring Boot, React, and MySQL, with a track record of independently designing, building, and deploying three production-grade systems from architecture through deployment. Delivered secure, scalable applications featuring JWT authentication, RESTful APIs, event-driven microservices with Kafka, and AI-powered features using Spring AI and RAG. Strong command of Object-Oriented Programming, Data Structures & Algorithms (250+ problems solved on LeetCode), Clean Architecture, and SOLID principles, with hands-on unit testing using JUnit and Mockito.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering 2022 - 2026

Guru Gobind Singh Indraprastha University (GGSIPU), India | CGPA: 8.1

SKILLS & TECHNICAL STACK

- **Programming Languages:** Java, SQL, MySQL
- **Backend & Frameworks:** Spring Boot, Spring Security, Spring Data JPA, Spring AI, Hibernate, JWT Authentication, RESTful APIs, WebSocket (STOMP), Kafka, Maven, JUnit, Mockito
- **Frontend:** React.js, Vite, Tailwind CSS, Framer Motion, React Router, React Query, Axios, Shadcn UI
- **Databases:** MySQL, PostgreSQL, PGVector, Database Management Systems
- **Tools & DevOps:** Git, GitHub, Postman, Docker, Redis, VS Code, Vercel
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming, Collections, Multithreading, DBMS, Operating Systems, Computer Networks, System Design, Clean Architecture, SOLID Principles

PROJECTS

ORIVEX - AI-Powered Freelance Marketplace [GitHub](#) | [Live Demo](#)

- Architected a full-stack freelance marketplace using React, Spring Boot, MySQL, and JWT-based authentication with role-based authorization, project management, and proposal workflows.
- Engineered real-time chat using WebSockets (STOMP), in-app notifications, contract management, and LiveKit-based audio/video calling.
- Applied Clean Architecture and SOLID principles across the backend and wrote unit tests using JUnit and Mockito to validate functionality.

CareerMetric AI - AI-Powered Career Intelligence Platform [GitHub](#) | [Live Demo](#)

- Built an AI-powered career intelligence platform using Java, Spring Boot, Spring AI, React, MySQL, and PostgreSQL/PGVector to analyze resumes and match them against job descriptions.
- Implemented AI-driven mock interviews, technical skill evaluation, skill-gap identification, and personalized preparation plans using RAG, embeddings, and tool calling.
- Designed conversational memory and vector search pipelines with PGVector to power context-aware AI interactions.

PulseDrop - Microservices-Based Real-Time Delivery Platform [GitHub](#)

- Developed a microservices-based real-time delivery platform using Java 21, Spring Boot, Kafka, Redis, MySQL, and React.
- Implemented Kafka event-driven communication and Redis GEO-based driver assignment and live location tracking for real-time delivery workflows.
- Secured APIs with Spring Security, JWT, and BCrypt with role-based authorization, using WebSocket (STOMP) for real-time order and notification updates.

ACHIEVEMENTS

- Solved 250+ Data Structures and Algorithms problems on LeetCode, strengthening problem-solving skills, algorithmic thinking, and coding interview readiness.
- Independently designed, built, and deployed three production-grade full-stack systems spanning marketplace, AI, and microservices domains.
